

No Power

Maybe the power supply in your computer or laptop is faulty?

Power supplies do wear out and lose power and become faulty over time.

Never fear, we are here. We keep some of the more popular power supplies on the shelf and if the one you need is not on the shelf, we can usually have it on the shelf by the morning.

If there are no major issues, then the power supply can be replaced on a one day or same day turnaround.

Faulty power supplies can, and do, cause a lot of different issues with your electronics.

Even phone chargers wear out in time.
